LOCAL GOVERNMENT ANAMBRA STATE.**

## **Who We Are**

We are a group of Non- Governmental entrepreneurs and investors with specialty on different field of life, coming together to create systems and edifices with sustainable resources. We are multi-faceted developers, in addition working on different phases of grass-root development scheme ranging from Technology and Tech-Related development schemes, Socio-Economic development, Human Resources Development etc. These systems are such that can profit every class of persons within the walls of Nigeria and Africa at large even to beyond as the case maybe. We, having burning passion for positive innovations and inventions within Africa have channeled our resources towards Scientific, technology and technology related development in Nigeria . We are currently based in Nigeria building structures with intentions to build platforms that will become a system of innovative development and financial freedom.

## **What Inspired Us**

Back In 2016 when I requested for my Adsense pin to be delivered to me at a location in South-Eastern part of Nigeria (Oko, Orumba South, Anambra state precisely) after submitting the address details I wasn't able to get this PIN from Google, I have to resubmit again with a different address location so I could be able to get the pin delivered to me, the problem here is that the first address I used was difficult to locate, so I have to use a popular address which I requested permission before using it.

The African Race is a developing people and environs equipped with diverse resources, but yet still strained by limitation and yet to be explored opportunities, despite the impressive invasion of science and technology. Africa is yet to fully come to the knowledge, understand or even harness her virtues and these have become great array of difficulties to the Africa souls. These problems are booming with strength, keeping us

at a siege, leaving a large part of the Africa populace hopeless and helpless to their sting. Nevertheless, we found pleasure in stepping into the mire of these difficulties and want to bring out hope in them, because these problems sponsored and inspired us to innovation, as popularly said "necessity is the mother of invention" Such Problems are:

1. Dis-Jointed communication and network between the Local and Urban regions: *It has been observes that there is great division and dis-joint between the Urban regions and the Rural regions due to distance, road network and other constraints. This circumstance have brought about great set-back to the development of rural regions, limiting their exploiting great values and virtues and becoming part of the trends of science and technology that is common in the urban region(s).*

2. Covid-19 Pandemic resurgence and doggedness and other cases similar: *During the Covid-19 pandemic invasion in the year 2020, a major part of the world were crippled because there was no measure to fall back to. In addition the Covid-19 Pandemic is barely one year extincted or cubed, but it has resurfaced and fighting hard because the whole protective measures have been lowered and many have found their regular unhealthy and unproductive lives wheeling again, simply because there seem to be no other means to live other than the conventional way of life that helped the virus spread earlier.*

3. High Cost of Transporting goods and individuals alike across the state and beyond the nation: *The increase in gasoline and other automobile motor engines propellant have directly affected the cost of transporting of individuals and goods, bringing it to the height of economic digression, increasing the cost of living. This problem affects*

*productivity and reduces output.*

4. Unemployment and limitations to resources for Job creation: *The rate of unemployment within the Nigeria Economical setting and across Africa is no longer a strange wind, having so many graduates and undergraduates alike without any meaningful financial engagement are now a threat to both lives and economy of many. Unemployment is the parent to many crime and economic limitation. In addition to the fact that many other may want to be responsible and legally engaged, the resources are far-fetched.*

5. Dependency on open market: *The obvious dependency on open market system was proven to be a danger in the year 2020, when the world's peace was threatened by the deadly Covid-19 virus invasion, this worldwide catastrophe led to a nationwide declared lock-down across the globe. In the light of this, many businesses shut down, feeding became almost a threat and so many other activities were abated because of complete dependency on open market. There were records of increased crimes, death and starvation, simply because the open market was shut down.*

6. Failure of organizations to build a sustainable Errand and Delivery services: *Over the years, several companies have come up with ideas to build and as well developed a sustainable Errand and Delivery service that is owned and managed by Africans, Nigerians in particular, which has failed woefully over a period of time. This issue has eaten deep into several life savings and killed many financial homes. The inability to build a sustainable online based Delivery platform in Africa is almost a plaque.*

7. Inability to create multiple stream of productivity: *Several individuals have desire to create multi-source of income, expansion and productivity but the tedious engagement*

*with their current business and tight schedule have kept that at an impossible height. Not minding the fact that the current job is not paying and aiding as much as desired or as it promises to. For this stance, many passionate persons have been kept at an economic stagnation and limitation. In addition many want to be productive and achieve a lot within the space of 24hrs that is given to man, but have been limited by other circumstances on the other hand.*

After a series of research and analysis on delivery services in Nigeria, I and my team decided to start working on a startup that will solve major delivery issues in Nigeria and Africa as a whole.

## **Our Solution**

Solving the problem of locating an address is trivial in the Nigerian delivery system also not just locating the address but locating it on time, Here is what our project proposes: Solving Delivery Nightmare in Nigeria with Mobile and Offline Technologies, we want to create a delivery service you can trust for fast and slick delivery.

The system we have to inject into the Economic and Social atmosphere is a special approach system designed specifically to defeat the strength of these challenges named and those that may arise subsequently as the case maybe overtime. We are bringing in a structure to the Economic and Socio-Econimic system already existing in Nigeria and Africa, to serve as an aid, means of strong-hold and redefinition. Our approach is to inject help into the system, in a bid to do that we are bringing these:

1. Multi Phased Delivery and Errand Scheme: This is our first approach designed to address the afore listed challenges. As part of our desire to produce a formidable delivery scheme as well as errand system, we are putting in place a delivery system that

will allow customers to be able to place order and get their goods picked up from any location, give room for customer-company vetting, delivered goods checking, tracking of their stuffs, connecting to different stores. As well as delivery and pick up of internationally delivered goods, goods for export, goods for local distribution etc. Our platform gives customers the avenue to do so much, beyond pick-ups, they can send invitations, send for errands while they comfortably continue with their normal life.

2. Inter/Intra Regional Access Point: On this note, we are offering customers the trust and ease we promised by giving them a neighborhood liaison centers and partners where they can communicate with, pick up their goods, and lay complaints. These liaison centers, pick-up points and partner bodies/organizations have direct connections to every other like centers across the nations which help to build customer's trust and improve excellent services. This Regional Access Points will be full representative of the organization.

3. Employing over 100 staffs: This platform will create job opportunity to over hundred (100) persons irrespective of academic background and qualifications. There will be courier service, errand merchant, office managers, business administrators, drivers and so on. Our delivery platform will help reduce un-employment at first the local government level, and then forge ahead to the state level and beyond.

4. Engage From Your Location System: A rare feature in a regular delivery or errand system, where our customers can place order, speak to customer agents, connect with a courier agent, track his/her goods, lay complaints, make enquiries, make payments and so on from any location without having to go to any physical shop or location. Our customers will have the avenue to engage with all the registered shops, and outlet for better services from any location to any location.

5. Multi- Registered Outlet and Open Market online we are creating a system that

translates the experience, feeling and possibilities of an open market to an online system. Whatever a customer can do in an open market we are giving almost 100% replica of that experience. On our platform, our customers have the avenue to connect with different stores, open markets, and errand agents simultaneously with ease. These services are available within a short time and with the best result.

6. Subsidized Transition Cost: We have a special approach to the cost of transporting goods across the nation, despite the price in transportation; our platform is designed to be minimal in charging for transition of goods, pick-ups, errands etc. Our approach will be considerate and effectual while we put to work on reaching out to our customers with as little profitable cost as possible.

7. Rural Connection: One of our major special feature, we are bringing a system that will not only benefit the urban dwellers or functional within the city axis, but efficient within the rural areas also. On this platform customers from rural regions can make order for pick-up in the city and have it delivered to them right in that village or community. On our platform every customer is connected to the world and the global community.

### **Our Vision**

We Hope to see the world of Delivery and Errand services transformed into a building that houses economic satisfaction, accuracy, domestic and industrial essence in no time. Being able to deliver even to the least and farthest regions without discrepancies.

One of the visions is to be able to deliver anything taking for instance: You forgot your umbrella at a shop close or far from you, you can call us in since you might be busy with other things, we can bring the umbrella to you.

Our platform will also work offline, using some technologies that will make it possible to make a delivery order even when you are not connected to the internet or stocked in an area without an internet network.

## **Our Core Values**

As an organization with the passion for excellence and result, we have our basic building block, what our organization is driven by. They are our principle for operation unbiased and un-broken: Being able to deliver to any location

If you can reach us through our app then we can deliver it to you. We want to bring delivery and errand service to low, average, and high personnel in the country, so our delivery service is not only limited to a few individuals. We can deliver anything as long it is legal.

1. Time is Gold: We value our clients' time and place at high esteem, so we will stick to agreed time, deliver in and with time.

2. Customers are core part of the system: Every customer is an esteemed member of the platform, and they are treated with uttermost regard.

3. Excellent Result or Nothing: We will try our best to deliver with maximum excellence, putting all available resources to produce the best of results. If it is not good, it is not us!

4. Standard and Quality is Premium Integrity: We want to keep to our promises as often as possible.
